

Installation Instructions for Bassinet Clip Straps Remedy to Avoid Fall

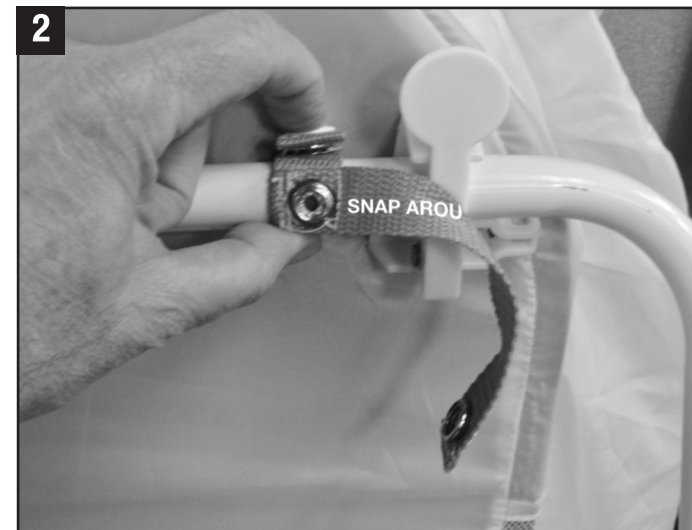

Without the bassinet clip straps installed, your bassinet could detach from the frame if the clips aren't locked correctly and fall, causing injury.

Your kit consists of two clip straps (left and right), a sticker and instructions.

STEP 1 - Slip the short section of the strap between the frame tube and bassinet bed floor, as shown.

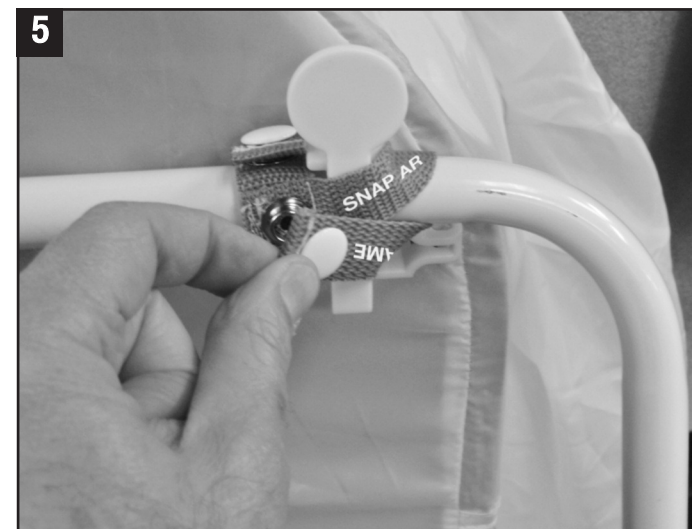

STEP 2 - Snap the ends of the short strap together, and align the long strap against the frame tube as shown.

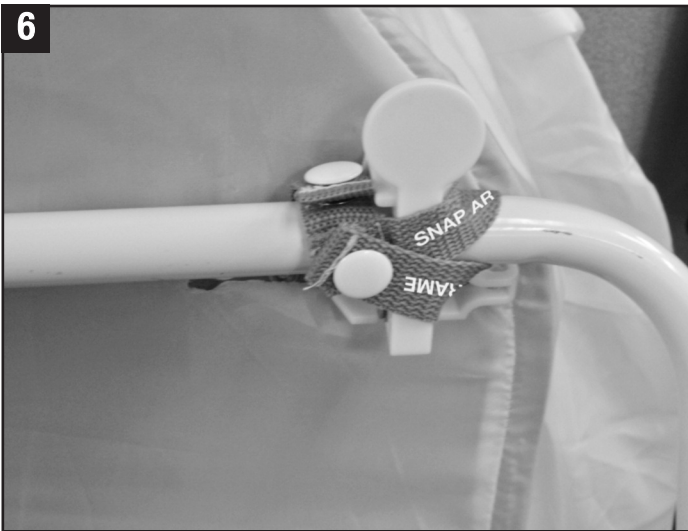

STEP 3 - Pull the strap across the plastic clip as shown.

STEP 4 - Wrap the strap around the frame tube.

STEP 5 - Bring the strap back across the plastic clip, and connect the snaps.

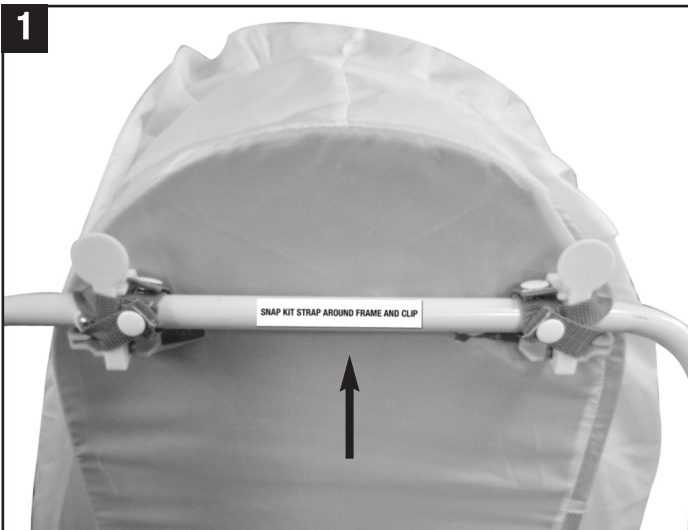

STEP 6 - The snapped clip strap should now look like this.

STEP 7 - Install the other clip strap around the other plastic clip, and your bassinet should look like the picture.

Please install the sticker onto the bassinet frame as shown.

STEP 1 - Peel backing off of sticker and adhere to bassinet frame as shown in the image above.

Keep these instructions with the bassinet for future reference.
